SUMMARY

Computer Engineering student experienced in building practical, scalable tools with Python, C++, cloud technologies, and AI. I work across software, automation, and system optimization to solve complex problems, improve user experience, and create real impact.

EDUCATION

The University of Texas at San Antonio *Expected: May 2027*

- Bachelor of Science in **Computer Engineering**– GPA: **3.7/4.0**

Achievements: President's List, Dean's List, Women in Toys Scholar, Klesse College Scholar, NSBE Scholar, USAA Scholar, Society of Women Engineers (SWE), herScript, Rewriting the Code

Coursework: Digital System Design, Computer Architecture, C++ and Data Structures, Micro Computer Systems

SKILLS

- **Languages & Frameworks**: Python, C++, C, JavaScript (Node.js, Express.js), PyTorch, VS Code, MATLAB, Linux.
- **Machine Learning & AI:** PyTorch, Machine Learning, Generative AI/LLMs, Google Cloud (Vertex AI, Gemini)
- **Systems, Hardware & Tools:** Microsoft Office Tools, SDADA Systems, Embedded Systems, 3D Printing, Agile Methodology, Git, Circuit Analysis, Root Cause Analysis.
- **Professional Strengths:** Cross-Functional Collaboration, Adaptability, Problem Solving, Attention to Detail

EXPERIENCE

EDP Renewables

Operations Engineering Intern, Houston, TX **June 2025 – August 2025**

- Designed a standardized data template that **reduced project setup delays by 70%**, streamlining **cross-functional** coordination between contractors and engineering teams.
- Engineered a **Python** automation tool (Selenium) to aggregate weather data, reducing reporting time by **50%**.
- Reduced company spend by **$200,000** in operational costs via automated tools and data logging solutions that improved workflow and visibility.

The University of Texas at San Antonio

Teaching Assistant / Peer Coach, San Antonio, TX **August 2024 – Present**

- Mentored **50+** students in Calculus and programming, translating complex engineering concepts into real-world applications, which improved student pass rates by **60%.**

Scholist App

Full Stack Developer Intern, Dallas, TX **May 2024 – August 2024**

- Architected a **Full Stack** scholarship platform within an **Agile** environment, transforming **Figma** prototypes into responsive **JavaScript** interfaces and scalable **Node.js** backends.
- Engineered a high-performance **RAG** recommendation system using **TurboPuffer** for vector storage and **Google Vertex AI**, achieving sub-millisecond retrieval speeds that reduced user churn by **50%** and increased paid conversions by **80%**

PROJECTS

Robotic Arm Project **Spring 2026**

- Programmed an Arduino-based robotic arm in **C++** with ultrasonic sensors, and 3D Printed parts, implementing PID logic to detect objects and improve pickup accuracy by **60%**

Real-Time Voice Captioning and Translation System **Spring 2025**

- Built a real-time captioning and translation system using a **PIC microcontroller** and **Python** to convert speech into formatted text on an LCD.
- Developed a Python speech-to-text pipeline using **Cloud Translation API** and **Gemini** for contextual understanding and multilingual translation across 100+ languages.

Autonomous Line Tracking Vehicle **Fall 2024**

- Engineered a fully autonomous mini vehicle utilizing infrared sensors and **C++** programming to enable precise path detection and following capabilities.
- Designed and implemented a control system architecture integrating microcontrollers with motor drivers to achieve responsive navigation with **<2ms** latency.

LEADERSHIP

National Society of Black Engineers (NSBE) – *Senator* **May 2025 - Present**

- Represent the UT San Antonio chapter at regional and national meetings, advocate for student needs and initiatives
- Planned and executed outreach, programming, and professional development events, boosting chapter participation by **30%**
